

AgentOps AI

Enterprise Service Operations Copilot

Agentforce portfolio project

A governed internal copilot for service teams that retrieves case work, summarizes resolution context, creates controlled follow-up actions, and answers support questions from approved Salesforce Knowledge.

What this implementation demonstrates

Agentforce orchestration

Dedicated subagents route requests to Case Operations, Case Resolution, and Knowledge Assistant capabilities.

Grounded AI

Prompt Builder and Salesforce Knowledge keep responses tied to live Case data and approved support content.

Governed automation

Flow-based actions support controlled follow-up task creation with user confirmation and action logging.

Enterprise design

Service Cloud, Flow, Prompt Builder, Agentforce Data Library, and auditability are combined in one coherent solution.

Technology: Salesforce Agentforce | Service Cloud | Flow | Prompt Builder | Salesforce Knowledge | Agentforce Data Library

This document uses only synthetic portfolio data. Browser chrome and org URLs have been removed from the screenshots.

1. Open Case Retrieval

The Case Operations subagent routes "Show open cases" to the Get My Open Cases Flow action. The response lists each assigned open Case with its case number, subject, status, and priority.

The screenshot displays the Agentforce interface during a 'Live Test' session. On the left, the 'Explorer' sidebar shows the 'Agent Definition' tree, with 'Subagents' expanded to show 'Case Operations'. The main 'Live Test' window shows a conversation where the user asks 'Show open cases', and the agent responds with a list of three open cases. The 'Agent Preview Details' panel on the right shows the flow: Input -> Transition to Subagent (Case Operations) -> Reasoning (Case Operations) -> Action (Get My Open Cases) -> Reasoning (Case Operations). A summary box explains the agent's reasoning and action. At the bottom, there are 'Trace' and 'Variables' buttons, and a session ID.

Live Test

Hi, I'm Agentforce! I use AI to search trusted sources, and more. Ask me "What else can you do?" to see how I can simplify your workday. How can I help?

Show open cases

Here are your open cases:

- 00001029 — Request for account statement
Status: New | Priority: Low
- 00001028 — Incorrect invoice amount displayed
Status: New | Priority: Medium
- 00001027 — Customer cannot access portal after MFA reset
Status: New | Priority: High

Would you like details on a specific case, or do you want to prioritize or take action on any of these cases?

Describe your task or ask a question...

Agent Preview Details

Context Variables Summary

- Input: Input
- Transition to Subagent: Case Operations
- Reasoning: Case Operations
- Action: Get My Open Cases
- Reasoning: Case Operations

The user asked to "Show open cases." The agent routed to the CaseOperations subagent, invoked the Get_My_Open_Cases action with the user request, received a list of three open cases with status and priority, and then presented those results back to the user with an offer to provide details or help prioritize.

Implementation path: Agentforce subagent -> Get My Open Cases Flow -> Salesforce Case records -> structured response.

2. Grounded Case Resolution

The Case Resolution subagent calls a Flow that retrieves the requested Case and invokes a Prompt Builder template. The generated response is structured as Issue, Current State, Recommended Next Action, and Escalation Risk.

Live Test

Summary for Case 00001027:

Issue: The customer cannot access the portal after performing an MFA reset and receives an "invalid verification code" error when trying to sign in, which is blocking portal access.

Current State:

Status: New

Priority: High

The issue started today and is preventing portal access.

Type: Other

Reason: Feedback

Recommended Next Action: Obtain the exact steps the customer performed during the MFA reset, the time of the reset, the authentication method used (SMS, authenticator app, or other), and a screenshot or the exact error text. Attempt a controlled login with the customer present to securely reproduce the error.

Escalation Risk: No clear escalation risk identified from the available case data.

Would you like to review another case or need help with next steps for this one?

Reasoning: Case Resolution

The user asked to "Summarize Case 00001027." The agent routed to the Case_Resolution subagent, invoked the Generate_Case_Resolution_Summary action with caseNumber 00001027, received a structured summary from the action, and replied with a formatted summary including Issue, Current State, Recommended Next Action, and Escalation Risk.

3. Knowledge-Grounded MFA Support

The Knowledge Assistant calls Answer Questions with Knowledge against an Agentforce Data Library. The response follows the published MFA procedure and displays the supporting Knowledge source.

The screenshot displays the Salesforce Agentforce interface during a 'Live Test' of an agent definition. The interface is divided into several sections:

- Explorer (Left Panel):** Contains a search bar and a tree view of the agent definition structure, including 'Agent Definition', 'Settings' (Agent Settings, System Messages, Agent-Level Instructions, Language Settings), 'Subagents' (Agent Router, General FAQ, Case Operations, Off Topic, Ambiguous Question, Case Resolution, Knowledge Assistant), 'Variables', 'Connections', and 'Data'.
- Preview (Top Bar):** Shows the current agent definition being tested, labeled 'Agent Def... X'.
- Live Test (Main Content Area):**
 - User Input:** A question is entered: 'help with the recommended next steps for this one?' followed by 'how do i reset mfa?'.
 - Agent Response:** The agent provides a detailed 5-step procedure for resetting Multi-Factor Authentication (MFA), citing a specific knowledge article: 'Reset Multi-Factor Authentication.[1]'. It also offers to provide the full article or help with a specific step.
 - Sources:** A section labeled 'Sources (1)' is visible at the bottom of the response.
- Agent Preview Details (Right Panel):**
 - Context Variables:** A tab labeled 'Summary' is active.
 - Flow Summary:** A vertical list of steps showing the agent's reasoning and actions: 'Input: Input', 'Transition to Subagent: Knowledge Assistant', 'Reasoning: Knowledge Assistant', 'Action: Answer Questions With Knowl...', and 'Reasoning: Knowledge Assistant'.
 - Description:** A text box explains the process: 'The user asked, "how do i reset mfa?" The agent routed to the Knowledge Assistant, invoked the Answer Questions With Knowledge action with the query, retrieved the "Reset Multi-Factor Authentication" knowledge article, and responded with a 5-step MFA reset procedure citing that article and offering the full article or help with a specific step.'
 - Ask Agentforce:** A button labeled 'Ask Agentforce' is present.
- Bottom Bar:** Includes a 'Trace' button, a 'Variables' section, and a session identifier 'Session: #265e9...'.

Implementation path: Agentforce subagent -> Answer Questions with Knowledge -> Agentforce Data Library -> published Salesforce Knowledge article with source citation.
